

Environments & Data Isolation Strategy

Document ID: DOC-ENV-003

Classification: Official

System: Case Ace v2.0 (Citizens Advice Wandsworth)

Standard Alignment: ISO/IEC 27001:2022 A.8.31 (Separation of development, test and production environments), ISO/IEC 27701:2019

1. Environments Overview

Case Ace v2.0 defines three distinct deployment environments: local, test, and pilot.

2. Core Isolation & Data Integrity Guarantees

Zero Real Client Data in Shared Development/Test Environments:

No developer workstation or shared test environment may ever process, ingest, or receive real client advice consultation audio, transcripts, or personal data.

Automated tests and local development run strictly against synthetic fixtures in test/synthetic-fixtures/.

Region Pinning to europe-west2 (London):

All cloud compute, transcription endpoints, AI models, and operational monitoring logs are strictly pinned to Google Cloud Platform's London region (europe-west2).

No network routing, logging sink, or cloud dependency is permitted outside the United Kingdom.

Runtime Configuration Enforcement:

The EnvironmentConfig schema validates environment boundaries at startup.

If an environment configuration is ambiguous or invalid, the system fails closed and terminates initialization immediately.
