

Classification: Internal / Operational

Without interrupting your casework workflow or keeping the client waiting, immediately switch to Casebook CRM and

author the consultation record manually using standard bureau procedures.

Step 5: Supervisory Notification

Send an internal email to supervisors@cawandsworth.org.uk and ai-feedback@adviceintelligence.tech containing:

The pseudonymous Session ID (displayed on screen, e.g. ses_prod_8475295c).

Error category selected.

A brief 1-sentence description of the discrepancy (e.g. "Model stated Section 21 notice was valid despite missing gas safety certificate").

IMPORTANT: Do NOT include client names, telephone numbers, or case reference numbers in this technical feedback email.

3. Supervisory & Technical Root Cause Investigation

```

    participant Supervisor as Lead Supervisor
    participant TechLead as Technical Systems Lead
    participant Corpus as Synthetic Test Engine
    participant Prompt as Prompt Registry

    Supervisor->>TechLead: Forwards Escalation Ticket with Session ID
    TechLead->>TechLead: Inspects Non-PII Log & Prompt Context
    TechLead->>Corpus: Creates Anonymised Edge Case Scenario
    TechLead->>Prompt: Refines Drafting Prompt (v2.4.x) / In-Context Examples
    TechLead->>Corpus: Runs 33+ Scenario Benchmark Validation
    Corpus-->>TechLead: Validates 100% AQS Pass & 0 Regression
    TechLead->>Supervisor: Releases Patched Prompt Version with Release Notes
    Supervisor-->>Supervisor: Archives Escalation with Closed Status
```

Investigation Protocol (< 48 Hours):

Log Analysis: The Technical Systems Lead reviews the non-PII telemetry payload (modelAndPromptVersion, wordCounts, verificationPassResult).

Failure Mode Diagnosis:

Was it an ASR transcription error? (e.g., Speech-to-Text misheard "invalid" as "valid").

Was it a prompt reasoning error? (e.g., Gemini 1.5 failed to resolve conflicting tenancy dates).

Was it context window truncation?

Synthetic Corpus Ingestion: The anonymised scenario structure is converted into a synthetic test case in test/corpus/syntheticAdviceCorpus.ts.

Prompt Patch & Regression Testing:

The drafting prompt is updated (e.g. v2.4.1) with explicit guardrail rules preventing that specific error pattern.

The full automated regression test suite is run to ensure zero regressions across all 33 baseline advice scenarios.

Closure Report: A monthly summary of all escalated material errors is presented to the CAW Quality Committee.
